# When doing nothing is best

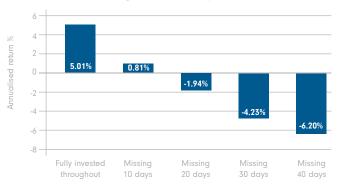

From time to time, stock markets go through periods of uncertainty. This could be down to some poor economic news or perhaps due to a political crisis. The sharp falls that can be experienced at such times is understandably unsettling for investors. They can even tempt some to change their long-term plan by selling their investments. However, stock market volatility does tend to be short lived. Therefore, most experts agree that investors are probably better off sitting tight through these unnerving periods.

Those who sell or delay making new investments when stock markets become uncertain are actually employing a strategy known as 'market timing'. The intention is often to invest once stock markets have calmed down or to buy when stock markets have gone even lower. This can be a very dangerous strategy.

Sharp falls in stock markets tend to be concentrated in short periods of time. Similarly, the biggest gains are often clustered together. It is also quite common for a large gain to follow a big fall (or vice versa). Accordingly, an investor who tries to anticipate when the best time is to invest runs a very high risk of missing the best gains. This can have a big impact on their long-term return.

To help illustrate this, we have analysed the average annual return from the UK stock market over the last 15 years. As the chart shows, missing just the ten best days over this period would have cut your annual return substantially. Timing the stock market is extremely difficult, the best policy is usually to stay fully invested over the long term.

## The effect of missing the best days

Source: Datastream, from 30.03.01 to 31.03.16, annualised return. Returns based on the performance of the FTSE All-Share, with initial lump sum investment of  $\mathfrak{L}1,000$  on a bid to bid basis with net income reinvested.

#### Effect of missing best days

Annualised returns for 15 years ending 31.03.16							
Index	Fully invested	Best days missed					
		10 days	20 days	30 days	40 days		
	5.01%	0.81%	-1.94%	-4.23%	-6.20%		
S&P 500	5.98%	1.19%	-1.79%	-4.37%	-6.70%		
DAX 30	3.64%	-1.78%	-5.40%	-8.51%	-11.14%		
CAC 40	2.29%	-3.17%	-6.69%	-9.39%	-11.82%		
Hang Seng	6.87%	0.75%	-2.59%	-5.26%	-7.70%		

All figures show annualised, total returns, taken from 15 year periods from 30.03.01 to 31.03.16, in local currency terms. Source: Datastream as at 31.03.16. Basis: bid-bid with net income reinvested.

#### **FTSE All-Share Index**

How the index has performed over the last five years								
	Mar 11 to Mar 12	Mar 12 to Mar 13	Mar 13 to Mar 14	Mar 14 to Mar 15	Mar 15 to Mar 16			
FTSE All-Share	1.4%	16.8%	8.8%	6.6%	-3.9%			

Source: Datastream from 31.03.11 to 31.03.16 on bid-bid basis with net income reinvested.

Please note that past performance is not a guide to the future. The value of investments can go down as well as up and you may get back less than you invested.

### The value of advice

When making decisions about investing, we recommend that you consult with a financial adviser. An adviser will work with you to understand your needs and then offer broad-based advice to help you achieve your long-term goals. Fidelity only gives information about its own products and services and does not provide investment advice based on individual circumstances.

- When stock markets become volatile, it is usually best to resist making changes to your long-term investment strategy
- It is too easy to miss the best gains when you try to time the stock market
- Time, not timing, is the key to investing
